

# Journal of Integrative Environmental Sciences

*JIES* prefers articles that demonstrate integrative research.

This image depicts how the *JIES* identifies environmental integration. There are six ways of integration at three levels (low, medium, high): **disciplines** (from mono-, multi-, inter- to transdisciplinary), **environmental issues** (from single to multiple issues), **sustainable development goals** (from one to multiple SDGs), the **cause-effect chain** (towards DPSIR: Drivers-Pressure- State- Impact-Response), the **supply chain** (from partial to full), or **scale** (from local to global). **Preference for *JIES* articles: integration at least at the median level for three areas.**
